

YOUR BUSINESS,
A JOURNEY WE EMBARK ON TOGETHER

ARTOIL

ARTOIL

we see business
as a journey

Energy is an essential element without which the modern world cannot exist. We aim to actively participate in transforming Romania and building a sustainable future. Our goal is to provide, on time and at the best price, the energy our partners need every day. We rank among the top suppliers of products and services in the fuel industry in the country, and this position allows us to build, step by step, the Romania of tomorrow together.

Our journey began in 2012, and as a company with Romanian capital, we feel the responsibility to support the national economy. This is why we have developed our own logistics for fuel transportation and adapted our services to be the solution for our partners' needs.

+230 mil. EURO
turnover
in 2022

+4000 clients
Artoil across
the country

1,24 mil. liters
transportation
capacity

40 tankers
forming the
available fleet

+188 mil. litres
of fuel
delivered in 2022

+19 thousand stations
in Romania and Europe where
the Artoil card service
can be used

The numbers above best reflect our ability and willingness to support partner companies. In nearly 10 years of existence, we have built a team that has both the drive and the means to find optimal solutions to meet the fuel-related needs of companies in Romania.

Behind these significant numbers stands our team, the people who have embraced a shared belief: to transform Artoil into the first choice for clients when it comes to fuel-related products and services.

Artoil Services

Fuel Card

The fuel cards offered by Artoil can be used in a network of over 1,000 stations in Romania (including all major retailers' stations) and more than 18,000 stations across Europe. We have created a dedicated online platform where we provide all the information about refueling, set credit limits, and, at the company level, we offer the option to customize the credit limit for each card.

With the card service, you gain control over purchases, have real-time access to fuel expenses, and all invoices are just a click away.

Consultancy

If your company operates a fleet of vehicles or machinery, we can help you optimize the fuel procurement process. Our goal is to find solutions to optimize both delivery times and costs, as well as costs related to fuel storage.

Acest serviciu se pretează și pentru companiile mici, adaptându-l pentru nevoile existente.

Diesel

The diesel supplied by ARTOIL is suitable for any type of compression-ignition engine. With EURO 5 characteristics, it reduces pollution, has a low sulfur content, and ensures increased engine performance and efficient combustion. Additionally, it provides protection against engine wear, corrosion, and injector deposits.

Gasoline

With a low sulfur content, the unleaded gasoline marketed by us protects the engine while also complying with EURO 5 standards, which results in a reduced level of greenhouse gas emissions. It also has a low content of benzene and aromatic hydrocarbons. It is intended for spark-ignition engines.

AdBlue

AdBlue is a new solution used to reduce nitrogen monoxide (NO) and nitrogen dioxide (NO₂) emissions, which are pollutants resulting from the combustion of fuel in diesel engines that use selective catalytic reduction systems. It is injected directly into the exhaust, and through a chemical reaction, the pollutants are broken down into pure nitrogen and water vapor.

Artoil Products

Road Bitumen

Road bitumen is a very viscous, hard-to-evaporate, dark-colored product obtained as a residue from the processing of suitable crude oils. It is used in road construction. The road bitumens we provide meet all the requirements specified by the applicable standards for the construction of any road structure.

CTL

Used for heating systems designed to operate with this type of fuel, such as boilers and industrial furnaces, CTL has the property of optimizing the operation of combustion installations. The characteristics of the supplied product meet the current standards.

Fuel Tanks

The tanks we sell are made in accordance with current European standards and constructed from high-quality carbon steel, with various storage capacities. Additionally, we offer a wide range of pumps and other accessories for tank equipment.

Artoil Commitment

We have created a system through which we monitor the performance we have in our relationship with each client.

Cost optimization

logistical optimization, national delivery through our own fleet, and achieving a lower price resulting from the volume of traded quantities.

1

The quality of the fuel

is guaranteed by its source, with partner refineries meeting all the applicable standards.

2

Credit

Artoil has the financial capacity to support clients' businesses, provides flexibility in the methods of granting credit, and offers multiple solutions for it.

3

Consultancy

we offer consultancy services to clients for selecting the right products and payment methods suitable for their business.

4

Business is a journey; choose the right partners
for this journey to reach your destination!
